0.1 Download Sitemap URLs

```
from lxml import etree

def download_sitemap_urls(sitemap_url):
    # Parse remote sitemap
    tree = etree.parse(sitemap_url)
    # Extract namespace
```

```

ns = tree.getroot().nsmap[None]
# Extract URLs using xpath and namespace
urls = tree.xpath('/s:urlset/s:url/s:loc/text()',
                  namespaces={'s': ns})

return urls

```

0.2 Write to csv

```

import csv

# data is a list of lists [[]]
def write_to_csv(filename, data)
    with open(filename, 'w') as f:
        csv_export = csv.writer(f)
        csv_data = []
        for row in data:
            csv_row = [item.encode("utf-8")
                       if isinstance(item, unicode) else str(item)
                       for item in row]

            csv_data.append(row)

        csv_export.writerows(csv_data)
    return True

return False

```
